

**ABSTRACT**

**Transport System for a Lithographic Apparatus and Device Manufacturing Method**

A lithographic apparatus and a device manufacturing method is disclosed. In particular, a transport system configured to transport substrates between the lithographic apparatus and a track is disclosed, the track comprising one or more processing devices. The transport system may also transport substrates between the processing devices within the track. In an embodiment, the transport system comprises a transporter pathway along which one or more tracks and lithographic apparatuses are spaced. The substrates can be transported along the transporter pathway by a transporting device adapted to hold a substrate.
